

AXIOM PROTOCOL

Immutable Charter

Post-mainnet rules that no founder, government, validator, or governance coalition can override.

Trust Mathematics, Not Power.

Draft v0.1 | 2026-05-12 | Phase 0 Specification

Purpose

The Immutable Charter defines which rules cannot be changed after mainnet launch. It is designed to prevent the creator, foundation, validators, governments, wealthy actors, or governance coalitions from turning Axiom into a controllable monetary system.

Core principle

The creator can write the first rules, but cannot rule the network. After mainnet, the protocol should be ownerless, adminless, permissionless, and monetarily immutable.

Immutable rules

- Max supply cannot exceed 100,000,000 AXM.
- Emission cannot exceed 1,000,000 AXM per year for 100 years.
- After the emission period ends, new minting is zero.
- No emergency mint path may exist.
- No admin key may freeze, seize, pause, rollback, blacklist, or mint at protocol level.
- Founder allocation carries no voting power.
- Founder has no administrative, monetary, or governance privilege.
- Core ownership rule: users control their own keys and balances.
- Governance cannot create privileged control over the monetary layer.

Evolvable rules

Operational parameters may evolve only through transparent social and technical consensus. Examples include gas optimization, VM performance, cryptographic upgrades, wallet safety standards, client improvements, and Layer 2 integration rules. These upgrades must not alter the constitutional monetary rules.

Upgrade process

- Public proposal with complete technical specification.
- Independent review and public audit window.
- Testnet deployment before mainnet activation.
- Timelock before activation.
- Multi-client compatibility where possible.
- Node adoption by voluntary upgrade, not forced centralized push.
- Clear rollback or migration plan for non-monetary software bugs.

Governance limits

- Governance cannot increase max supply.
- Governance cannot change founder non-voting status.
- Governance cannot create admin keys.
- Governance cannot freeze balances at protocol level.
- Governance cannot bypass public review and timelocks.
- Governance cannot force all nodes to accept a client without social adoption.

Founder status

The founder may be recognized as the creator and contributor, but the founder is not a controller. The founder allocation is an economic reward under long-term vesting, not a governance instrument.

Disclaimer

This document is a Phase 0 research and design specification. It is not investment advice, legal advice, security assurance, or a promise that the system is feasible without further research, simulations, audits, and testnet validation.
